

# LEAD SCORING CASE STUDY

ISRAR AHMED

# PROBLEM STATEMENT

- X Education sells online courses to industry professionals.
- X Education gets a lot of leads, its lead conversion rate is very poor. For example, if, say, they acquire 100 leads in a day, only about 30 of them are converted.
- To make this process more efficient, the company wishes to identify the most potential leads, also known as 'Hot Leads'.
- If they successfully identify this set of leads, the lead conversion rate should go up as the sales team will now be focusing more on communicating with the potential leads rather than making calls to everyone.

# BUSINESS OBJECTIVE

X education wants to know most promising leads.

For that they want to build a Model which identifies the hot leads.

Deployment of the model for the future use.

# SOLUTION METHODOLOGY

- Data cleaning and data manipulation.
  - a. Check and handle duplicate data.
  - b. Check and handle NA values and missing values.
  - c. Drop columns, if it contains large amount of missing values and not useful for the analysis.
  - d. Imputation of the values, if necessary.
  - e. Check and handle outliers in data.
- EDA
  - a. Univariate data analysis: value count, distribution of variable etc.
  - b. Bivariate data analysis: correlation coefficients and pattern between the variables etc.
- Feature Scaling & Dummy Variables and encoding of the data.
- Classification technique: logistic regression used for the model making and prediction.
- Validation of the model.
- Model presentation.
- Conclusions and recommendations

# DATA MANIPULATION

Total Number of Rows = 37, Total Number of Columns = 9240.

Single value features like “Magazine”, “Receive More Updates About Our Courses”, “Update me on Supply”

Chain Content”, “Get updates on DM Content”, “I agree to pay the amount through cheque” etc. have been dropped.

Removing the “Prospect ID” and “Lead Number” which is not necessary for the analysis.

After checking for the value counts for some of the object type variables, we find some of the features which has no enough variance, which we have dropped, the features are: “Do Not Call”, “What matters most to you in choosing course”, “Search”, “Newspaper Article”, “X Education Forums”, “Newspaper”, “Digital Advertisement” etc.

Dropping the columns having more than 35% as missing value such as ‘How did you hear about X Education’ and ‘Lead Profile’.

The background is a gradient of deep blue and purple, speckled with white dots resembling stars. Overlaid on this are several faint, white circular patterns. Some are solid lines, while others are dashed. Some circles have arrows indicating a clockwise direction. One large circle on the left has a scale with numbers from 140 to 260. Another circle in the upper right has a scale from 150 to 180. The overall aesthetic is technical and scientific.

# EDA

EXPLORATORY DATA ANALYSIS

# INFERENCES

- API and Landing Page Submission bring higher number of leads as well as conversion.
- Lead Add Form has a very high conversion rate but count of leads are not very high.
- Lead Import and Quick Add Form get very few leads.
- In order to improve overall lead conversion rate, we have to improve lead conversion of API and Landing Page Submission origin and generate more leads from Lead Add Form.

• **This correlation matrix displays high correlation between 'Converted' and**

- Total visits
- Page views per visit
- Time spend on website

- Maximum number of leads are generated by Google and Direct traffic.
- Conversion Rate of reference leads and leads through welingak website is high.
- To improve overall lead conversion rate, focus should be on improving lead conversion of Olark chat, organic search, direct traffic, and google leads and generate more leads from reference and welingak website.

Total Visits

Total Time Spent on Website

Page Views Per Visit

# DATA CONVERSION

- Numerical Variables are Normalized
- Dummy Variables are created for object type variables
- Total Rows for Analysis after dummy variable creation: 8474
- Total Columns for Analysis after dummy variable creation: 79

# MODEL BUILDING

- Splitting the Data into Training and Testing Sets.
- The first basic step for regression is performing a train-test split, we have chosen 70:30 ratio.
- Use RFE for Feature Selection
- Running RFE with 15 variables as output
- Building Model by removing the variable whose p- value is greater than 0.05 and VIF value is greater than 5.
- Predictions on test data set.
- Overall accuracy 92%.

# ROC CURVE

- Finding Optimal Cut off Point
- Optimal cut off probability is that Probability where we get balanced sensitivity and specificity.
- From the second graph it is visible that the optimal cut off is at 0.2

# IMPORTANT FEATUTRES

## Variables that have high lead conversion Probability

- Tags – Closed by Horizon, Lost to EINS, Will
- revert after reading the email
- Lead Source – Welingak Website
- Last Notable Activity – SMS Sent

## Variables that need improvement in converting Quality Lead

- Tags – Invalid Number
- Tags – Ringing
- Tags – Switched off
- Last activity olark chat conversation

# CONCLUSION

It was found that the variables that mattered the most in the potential buyers are  
(In descending order) :

- The total time spend on the Website.
- Total number of visits.
- When the lead source was:
  - a. Google
  - b. Direct traffic
  - c. Organic search
  - d. Welniak website
- When the last activity was:
  - a. SMS
  - b. Olark chat conversation
- When the lead origin is Lead add format.
- When their current occupation is as a working professional. Keeping these in mind the X Education can flourish as they have a very high chance to get almost all the potential buyers to change their mind and buy their courses.

# RECOMMENDATION

The background is a gradient from dark purple at the top to deep blue at the bottom, filled with a pattern of small, light blue stars. On the right side, there are several faint, white technical diagrams. These include a large circular scale with degree markings from 0 to 210, a smaller concentric circle with an arrow, and a dashed circular path with an arrow. In the bottom left corner, there is a partial view of another circular diagram with an arrow.

- Focus more on customers who spend a lot of time on the company's website as their conversion rate is high as per EDA.
- Providing special offers to customers who are highly interested and are seen visiting back to the website.
- Leads who have Tags such as 'Ringing', 'Switched Off', 'Invalid Number' can be avoided as the probability of them converting is very low.
- Follow up through calls and emails with high conversion probability leads is suggested.

The background is a gradient of dark blue to purple, overlaid with a pattern of small white stars. Faint, light blue technical diagrams are visible, including a circular scale with degree markings (90, 100, 110, 120, 130, 140, 150, 160, 170, 180, 190, 200, 210) and arrows, and other circular patterns with dashed lines and arrows.

THANK YOU
